

Unable to Admit Claim

Date : 30-Aug-2026
Time : 01:02 PM

To,

Metro Heart Institute,
Sectro - 16 A, ,

Dear Sir/Madam,

We refer to the claim request for the insured patient mentioned below towards hospitalization for Fever, unspecified

Claim Intimation Number	CIR/2027/161124/0893917
Name of the Insured	SUMITA
Age / Gender	35 years / F
Product Name	Star Comprehensive Insurance Policy
UIN No.	SHAHLIP25037V082425
Policy Number	7358112006088321
Policy Period	06 Nov 2025 to 05 Nov 2026
Date of Admission	29 Aug 2026 12:00 PM
Room Category	Single private room
Co-Pay%	0
Name of the Hospital and Location	Metro Heart Institute, Paridabad

We regret we are unable to admit the claim for the below-mentioned reason(s):

1. On reviewing the submitted documents vitals are stable throughout hospitalization discrepancy between vitals and complaints accepted medical protocol not followed

The denial clause/s with description is/are reproduced below for your ready reference

Clause	Description
Condition 1	Disclosure of Information: The policy shall be void and all premium paid thereon shall be forfeited to the Company in the event of misrepresentation, mis description or non-disclosure of any material fact by the policy holder.

If you have any questions or require further clarification, please reach out to our customer support team at 1800 425 2255 / 1800 102 4477.

Warm Regards,

[Signature]

(Team STAR Health)

Quality Accreditations

To

The Cashless Deptt,

Bajaj TPA

Reconsideration – Mrs Sumita – 35 Yrs/F

Sir/Madam,

- Patient had complaints of severe pain abdomen, multiple episodes of loose stools (15-20 episodes/day), recurrent vomitings (14-16 episodes/day), poor oral intake and severe generalized weakness since 6-7 days.

- She took OPD Consultation from Medwin Hospital, Fbd (consultation paper dated 26th Aug., 2026 – enclosed) but she didn't get any relief from oral medication and came to MHI Fbd with aggravated above mentioned complaints.

ON ADMISSION

Physical Examination: No cyanosis, oedema, Icterus

Pulse Rate : 108 bpm, regular

BP : 110/70 mm Hg

Temp : 102.8° F

- Investigations : -CBC(Hb – 8.2, TLC – 1580, Platelet Count – 75 K , KFT (Urea – 15, Creatinine – 0.7, LFT (S.Total Bilirubin – 0.8, SGOT – 73, SGPT – 72, S. Albumin 3.0,

Dengue IgM – POSITIVE ESR 30, CRP 76.3 ↑↑

DIAGNOSIS:

- Acute Abdomen
- Age with severe emesis with dehydration
- AFI with thrombocytopenia ? Dengue fever (Dengue IgM positive)
- GI Sepsis (CRP 76.3)

- During stay, Patient had complaints of fever, vomitings with nausea, loose stools bodyache, generalised weakness, She needed urgent iv medication intervention as **She didn't get any relief from oral medications** and was medically managed with iv antipyretics, iv antibiotics, iv anti emetics, iv PPI, iv analgesics. Iv fluids and other supportive medications which are medically indicated in such condition.

- Hence her hospitalization was fully justified. Kindly reconsider the case and approve.

Thanks

SEROLOGY REPORT

Test Name	Result	Units	Bio Ref Range	Method
* TYPHidot IgG & IgM				
TYPHidot IgG : NEGATIVE				
TYPHidot IgM : NEGATIVE				

1. TYPHidot IS A VELOCITY METHOD OF DIAGNOSIS WHICH DETECTS QUALITATIVE ANTIBODY TO SPECIFIC OTHER MEASLES AND PROTEIN OF SALMONELLA TYPH (AS INCUBATION PERIOD IS 10-12 DAYS & BY THE TIME PATIENT HAS FEVER, IgM LEVEL CAN BE DETECTED BY TYPHidot).
 2. AS WITH ALL SEROLOGICAL TESTS, DETECTION OF ADEQUATE LEVELS OF ANTIBODY DEPENDS ON THE IMMUNOLOGICAL STATUS OF THE PATIENT, WHICH IS ALSO DEPENDENT ON THE PATIENT'S NUTRITIONAL STATUS.

* DENGUE VIRUS IgG & IgM ANTIBODIES

DENGUE VIRUS IgG - POSITIVE
 DENGUE VIRUS IgM - NEGATIVE

* MALARIA ANTIGEN RAPID TEST

NEGATIVE

Lab No	UR26013737	Date	29-AUG-2026
Name	MRS. SUMITA	Age/Sex	35YRS 11MN 11DY / F
Referred By	DR NEERAJ DHAR / VEMULA VENKATA RAHUL	Regn. No	26/36842
Panel	STAR HEALTH SERVICES & ALLIED INS. CO.LTD	UHID	827816
Reported By	DR. VINEY SHARMA	Report Time	29-08-2026 13:20:56
Bill No		Room No.	SP-402-01

USG WHOLE ABDOMEN

Liver is enlarged in size (~17.5 cm) and shows mildly increased parenchymal echogenicity. Vascular channels are clear. No evidence of I.H.B.R. dilatation seen.

Gall Bladder is not seen (post cholecystectomy status). Proximal CBD is normal. CBD stent is seen in situ.

Spleen is normal in size (~11.3 cm), shape and echotexture. Portal vein is normal.

Pancreas: Visualized pancreatic head and proximal body appear normal in size, shape & echotexture. Rest of the pancreas is obscured by bowel gas.

Right Kidney is normal in size (~10.0 x 3.8 cm), shape, position, outline & echogenicity. CMD is well preserved. No evidence of calculus/mass lesion or hydronephrosis seen.

Left Kidney is normal in size (~11.0 x 4.7 cm), shape, position, outline & echogenicity. CMD is well preserved. No evidence of calculus/mass lesion or hydronephrosis seen.

Urinary Bladder is well distended with normal wall thickness. Lumen is clear. No calculi / mass lesion or diverticulum noted.

Uterus is normal in size, shape and echotexture. No focal lesion seen. Endometrium measures ~6 mm. Ovaries are normal.

Adnexa are normal in size, shape and echotexture. No adnexal mass noted.

No free fluid is noted.

CONCLUSION:

Hepatomegaly with grade-I fatty liver.

Please correlate clinically.

SEROLOGY REPORT

Test Name	Result	Units	Bio Ref Range	Method
-----------	--------	-------	---------------	--------

* C-REACTIVE PROTEIN (CRP)	76.3	mg/L	(< - 10)	vitros 5600
----------------------------	------	------	-----------	-------------

INTERPRETATION:

CRP is found to be present after the first trimester of pregnancy and persists until delivery. CRP levels increase in women who are on oral contraceptives. CRP response is not affected by the commonly used anti-inflammatory or immunosuppressive drugs, including steroids, unless the disease activity is affected and it covers an exceptionally broad incremental range up to 3000 times. Since CRP production is a non-specific response to tissue injury, it is recommended that results of the test should be correlated with clinical findings to arrive at the final diagnosis.

Note: Positive result indicates CRP titre in undiluted serum is 10 mg/l or more. Non-specific positive result may be observed in markedly lipemic or hemolytic serum.

THYROID PROFILE TOTAL

Test Name	Result	Units	Bio Ref Range	Method
TOTAL T3	1.78	ng/ml	(0.97 - 1.69)	Enhance chemilum

Method : Automated test by Enhanced Chemiluminescence by vitros 5600.

The measurement of serum T3 is used in the diagnosis of Thyroid disease particularly hyperthyroidism. In most hyperthyroid patients both serum T3 & TSH are elevated. However 5-10 % of hyperthyroidism cases have concentration with normal serum T4 called Thyrotoxicosis. Such clinical condition makes it vital to establish that serum T3 is normal before excluding the diagnosis of thyroidism.

TOTAL T4	8.58	ugm/dl	(5.53 - 11.0)	Enhance chemilum
----------	------	--------	-----------------	------------------

Method : Automated test by Enhanced Chemiluminescence by vitros 5600.

The measurement of serum T4 is used in the diagnosis of Thyroid disease particularly hyperthyroidism. In most hyperthyroid patients both serum T3 & TSH are elevated. However 5-10 % of hyperthyroidism cases have concentration with normal serum T4 called Thyrotoxicosis. Such clinical condition makes it vital to establish that serum T4 is normal before excluding the diagnosis of thyroidism.

TSH (THYROID STIMULATING HORMONE)	5.869	uIU/ml	(0.465 - 4.68)	Enhance chemilum
-----------------------------------	-------	--------	------------------	------------------

Method : Automated test by Enhanced Chemiluminescence by vitros 5600.

Automated test by Enhanced Chemiluminescence by vitros ECI

In cases of clear cut primary hypothyroidism, T.S.H levels are always much higher than normal and thyroid hormones levels are low. In partial or mild hypothyroidism a moderate increase in TSH levels enables normal thyroid production to be maintained without any apparent clinical systems. In cases of hyperthyroidism T.S.H levels are severely inhibited and may be undetectable. In rare forms of high origin hyperthyroidism T.S.H levels are not reduced due to no effect by negative feedback control.
