To,

The Administrator / Medical Superintendent,
Metro Heart Institute,
Sunflag Hospital, Sector-16a,
Hospital ID: (50651)

Dear Partner,

This is with reference to the Cashless claim (145133425) submitted with the following details:

Patient Details

Patient Name	Rattan Lal Madan
Insurance Company	The Oriental Insurance Co. Ltd.
Member ID	34649736 / 4082174024
Policy Holder	AKQA MEDIA INDIA PRIVATE LIMITED
Treating Doctor	alok
IP No.	NULL
Policy No.	590000/48/2026/5655
Primary Beneficiary	Gaurav Madan
Employee ID	AKQA0136
Insurer Claim No	
Insurer Member ID	
Provisional Diagnosis	Fever Of Unknown Origin

Every Report

We require the following additional information to proceed with the processing of the claim:

1. Kindly provide all claim documents pertains to this claim

These documents must be submitted as early as possible to speed up the process of cashless claim pre authorization. Any response received post discharge of the beneficiary may lead to denial of cashless facility.

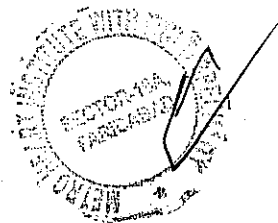

We assure you the best of our services, always.

Warm Regards,
Paramount Health Insurance TPA Pvt. Ltd
Plot No. A-442, Road No-28, M.I.D.C Industrial Area, Wagale Estate Ram Nagar, Vitthal Rukhmani Mandir,
Thane, Maharashtra 400604

AM Aul Rapur - Gaurav
Investigation Report

Disclaimer: The TPA extends the cashless facility subject to the standard terms & conditions of the policy and the information provided in the cashless request form. We suggest that the patient continues with the treatment as advised by the treating doctor, irrespective of the pre-authorization/cashless facility.

THIS IS A SYSTEM GENERATED CORRESPONDENCE. PLEASE DO NOT REPLY TO THIS EMAIL

HRCT CHEST

Technique: Helical acquisition of chest was done on MDCT scanner followed by HRCT cuts & multiplanar reconstruction.

FINDINGS:

Patchy areas of ground glassing with associated interlobular septal thickening coalescing to form subsegmental areas of consolidation are seen in on the lobes of the bilateral lungs, more marked in bilateral lower lobes.

A simple cyst measuring ~7mm is seen in medial segment of right middle lobe.

Multiple subcentimetric to enlarged mediastinal (pre/ paratracheal, prevascular, pre/ subcarinal and AP window) and bilateral hilar lymph nodes are seen with few of the nodes showing calcification, largest measuring ~15 x 13 mm in subcarinal location.

Mild cardiomegaly is seen with pericardial effusion with maximum thickness of pericardial fluid, measuring 9mm.

Small sliding type hiatus hernia is seen.

Rest of the lung fields are normal in attenuation and vascularity pattern.

The trachea and major bronchi are normal.

Atheromatous changes are seen in aorta.

Degenerative changes are seen in the visualised spine in form of marginal and bridging osteophytes.

Visualized abdominal cuts reveal:

1. Multiple calculi in gall bladder lumen ranging between 5-8mm in size (Adv:- USG correlation).
2. Bilateral perinephric fat stranding (Adv: KFT correlation).

IMPRESSION:

- Patchy areas of ground glassing with associated interlobular septal thickening coalescing to form subsegmental areas of consolidation in on the lobes of the bilateral lungs, more marked in bilateral lower lobes – suggestive of atypical infective etiology.
- A simple cyst in medial segment of right middle lobe.
- Mediastinal and bilateral hilar lymphadenopathy as described above.
- Mild cardiomegaly with pericardial effusion (Adv: 2D Echocardiography correlation).
- Small sliding type hiatus hernia.

Please correlate clinically.

Dr. Nayab Fakhir
MBBS, DNB, EDIR, DICRI
Consultant Radiologist

Note: This is a professional opinion based on imaging findings and not the diagnosis. It should be correlated clinically and with other relevant investigations to arrive at a proper conclusion. Not valid for medico-legal purposes.

Reported By	DR. MANISHA GARG	Report Time	28-08-2026 13:03:21
No		Room No.	2605 PVT ROOM

USG WHOLE ABDOMEN

Liver is normal in size and shows mildly increased parenchymal echotexture. Vascular channels are normal. No evidence of I.H.B.R. dilatation seen.

Gall bladder is well distended and reveals normal walls. Multiple calculi are noted with average size from ~ 5 to 6 mm. Proximal CBD is normal. Distal CBD is obscured.

Spleen is normal in size, shape and echotexture. Portal vein is normal.

Pancreas: Visualized pancreatic head and proximal body appear normal in size, shape & echotexture. Distal part of the pancreas is obscured by bowel gas.

Right Kidney is normal in size, shape, position, outline & echogenicity. CMD is well preserved. No evidence of calculus/mass lesion or hydronephrosis seen.

Left Kidney is normal in size, shape, position, outline & echogenicity. CMD is well preserved. No evidence of calculus/mass lesion or hydronephrosis seen.

Urinary Bladder is partially distended. Prostate could not be commented upon. However, visualized prostate appears enlarged (measuring ~ 66 cc in volume).

No free fluid seen in the peritoneal cavity. Gaseous distension of bowel loops seen.

IMPRESSION:

- Grade-I fatty liver.
- Cholelithiasis.
- Grade-III prostatomegaly.

Please correlate clinically.

Aortic Valve : Normal	Pulmonary Artery : Normal
Tricuspid Valve : Normal	Aorta : Normal
Pulmonary Valve : Normal	Right Atrium : Normal
Right Ventricle : Normal	Left Atrium : Normal
Left Ventricle : Normal in size	

2-D ECHOCARDIOGRAPHY FINDINGS :

LV normal in size with normal contractions. No LV regional wall motion abnormality in basal state. LV shows borderline concentric hypertrophy. RV normal in size with adequate contractions. LA and RA normal. All cardiac valves are structurally normal. Minimal pericardial effusion seen towards RA and RV measuring 7 mm in its maximum extent. No intracardiac mass. IVC is normal. Estimated LV ejection fraction is 60%.

COLOR FLOW MAPPING :

Trivial tricuspid regurgitation.

DOPPLER STUDIES :

MVIS A > E

Peak systolic velocity across aortic valve = 1.4 m/sec.

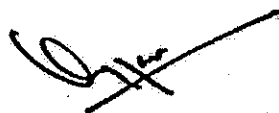

Peak systolic velocity across pulmonic valve = 1.1 m/sec.

Predicted RV systolic pressure = 22 + right atrial pressure (v wave).

No AS/AR/MS/MR/TS/PS/PR

IMPRESSION :

1. LV normal in size with normal systolic function (LVEF = 60%).
2. No LV regional wall motion abnormality.
3. Borderline concentric left ventricular hypertrophy.
4. Grade I LV diastolic dysfunction.
5. RV normal in size with adequate systolic function.
6. No significant pulmonary artery hypertension.
7. Minimal pericardial effusion (as described in text).

HRCT CHEST

Technique: Helical acquisition of chest was done on MDCT scanner followed by HRCT cuts & multiplanar reconstruction.

FINDINGS:

Patchy areas of ground glassing with associated interlobular septal thickening coalescing to form subsegmental areas of consolidation are seen in on the lobes of the bilateral lungs, more marked in bilateral lower lobes.

A simple cyst measuring ~7mm is seen in medial segment of right middle lobe.

Multiple subcentimetric to enlarged mediastinal (pre/ paratracheal, prevascular, pre/ subcarinal and AP window) and bilateral hilar lymph nodes are seen with few of the nodes showing calcification, largest measuring ~15 x 13 mm in subcarinal location.

Mild cardiomegaly is seen with pericardial effusion with maximum thickness of pericardial fluid, measuring 9mm.

Small sliding type hiatus hernia is seen.

Rest of the lung fields are normal in attenuation and vascularity pattern.

The trachea and major bronchi are normal.

Atheromatous changes are seen in aorta.

Degenerative changes are seen in the visualised spine in form of marginal and bridging osteophytes.

Visualized abdominal cuts reveal:

1. Multiple calculi in gall bladder lumen ranging between 5-8mm in size (Adv:- USG correlation).
2. Bilateral perinephric fat stranding (Adv: KFT correlation).

IMPRESSION:

- Patchy areas of ground glassing with associated interlobular septal thickening coalescing to form subsegmental areas of consolidation in on the lobes of the bilateral lungs, more marked in bilateral lower lobes – suggestive of atypical infective etiology.
- A simple cyst in medial segment of right middle lobe.
- Mediastinal and bilateral hilar lymphadenopathy as described above.
- Mild cardiomegaly with pericardial effusion (Adv: 2D Echocardiography correlation).
- Small sliding type hiatus hernia.

Please correlate clinically.

Dr. Nayab Fakhir

X-RAY CHEST AP VIEW

Rotation ++

Prominent bronchovascular markings are seen in bilateral lung fields.

Aortic knuckle calcification is seen.

Left costophrenic angle is hazy.

Right costophrenic angle is clear.

Bilateral hilar shadows are normal.

Heart size cannot be commented upon (A.P. view).

Bony thorax and soft tissues of the chest are normal

Please correlate clinically.

USG WHOLE ABDOMEN

Liver is normal in size and shows mildly increased parenchymal echotexture. Vascular channels are clear. No evidence of I.H.B.R. dilatation seen.

Gall Bladder is well distended and reveals normal walls. Multiple calculi are noted with average size ranging from ~ 5 to 6 mm. Proximal CBD is normal. Distal CBD is obscured.

Spleen is normal in size, shape and echotexture. Portal vein is normal.

Pancreas: Visualized pancreatic head and proximal body appear normal in size, shape & echotexture. Rest of the pancreas is obscured by bowel gas.

Right Kidney is normal in size, shape, position, outline & echogenicity. CMD is well preserved. No evidence of calculus/mass lesion or hydronephrosis seen.

Left Kidney is normal in size, shape, position, outline & echogenicity. CMD is well preserved. No evidence of calculus/mass lesion or hydronephrosis seen.

Urinary Bladder is partially distended. Prostate could not be commented upon. However, visualized prostate appears enlarged (measuring ~ 66 cc in volume).

No free fluid seen in the peritoneal cavity. *Gaseous distension of bowel loops seen.*

IMPRESSION:

- Grade-I fatty liver.
- Cholelithiasis.
- Grade-III prostatomegaly.

Please correlate clinically.
